

LOBBYGUARD ASSIST

Secure Your Facility

LobbyGuard Assist is a web-based visitor management system designed to help public and private institutions maintain control and more effectively manage their employee and visitor activity. LobbyGuard Assist installs on your existing PC, records all visitor and employee traffic details, runs instant background checks, prints photo ID badges, and provides access to a full range of visitor traffic reports from anywhere on the Web.

Fastest Visitor Sign-In on the Market

LOBBYGUARD™

Sign In. Sign Out. Secure.

LobbyGuard Assist is a feature-rich, easy to operate visitor management system that works on your existing PC.

Easy To Use

LobbyGuard Assist is simple, easy-to-use visitor management software. Front desk personnel can be fully trained in a matter of minutes, tracking visitors with just a few mouse clicks.

Efficient

Front desk staff can sign visitors in or out in less than six seconds and still provide a high level of personal interaction with visitors.

Flexible

LobbyGuard Assist provides different hardware combinations and pricing options to meet any security plan and budget.

LobbyGuard Assist makes use of any combination of the peripherals below.

Badge Printer
Quickly prints custom badges with photo, name, and time.

Camera
5 megapixel camera captures a clear photo of each visitor.

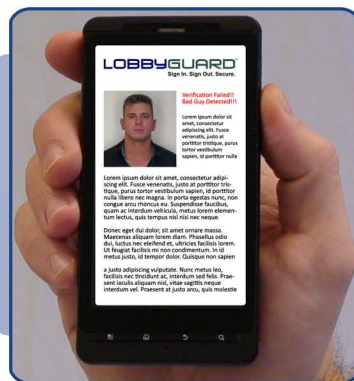

License Scanner
Captures information from all 50 states + 600 other ID formats.

Barcode Scanner
Scan the bar code on the visitor badge to instantly sign out.

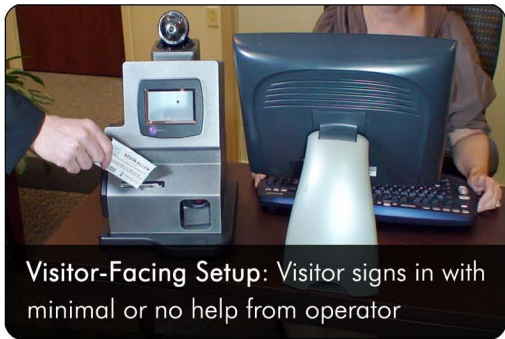

Get the most from LobbyGuard Assist with the Assist Station.
The All-in-One Assist Station contains all of the supported hardware (shown above) in a vandal-resistant steel housing with a single USB cable to attach to your PC.

INSTANT BACKGROUND CHECKS

All visitors can optionally be screened against national criminal databases and/or your own Red Flag List of unwanted individuals.

LobbyGuard instantly alerts your security personnel in the event of a background failure.

Visitor-Facing Setup: Visitor signs in with minimal or no help from operator

Operator-Facing Setup: Operator signs in visitor for a more personal approach.

LobbyGuard Assist Features

Prints Visitor Badges Automatically

Turbo printer quickly creates a photo identification badge. LobbyGuard visitor badges come in seven exclusive colors to help your visitor passes stand out.

Runs Instant Background Checks

Checks all visitors against sex offender registry and your own red flag list of banned individuals. Screening feature deters unwanted visitors, reducing the potential for violence, damage, or theft.

Maintains Photo Record of all Visitors

Stores current photo alongside driver's license photo in a secure database.

Supports Frequent Visitor Registration

Register frequent visitors, employees, and volunteers with LobbyGuard, making future sign-in and sign-out much faster via key tags or stick-on barcodes.

Records Time and Attendance

Generate accurate time sheets for employees and volunteers in your facilities. Photo capture option prevents "buddy punching".

Hosts Data Off-Site in Secure Environment

Off-site hosting means data security, data backup, and access to visitor records from anywhere.

Includes Powerful Reporting Engine

Real-time reporting provides crucial information in the event of an emergency.

Works in Any Environment

LobbyGuard works in any environment — as an alternative to traditional lobby personnel, or as a complement to your current lobby environment. LobbyGuard is currently in use at K-12 schools, universities, corporate and government buildings, physician's offices, hospitals, correctional facilities, private residences, shelters, embassies, hotels, resorts, and casinos.

Integrates with Other LobbyGuard Products

Network multiple LobbyGuard Assist installations together and view roll-up reports from across your district, company, or around the world. LobbyGuard Assist also integrates and networks seamlessly with the LobbyGuard Kiosk.

System Requirements

Windows XP, Vista, or 7

2 GB RAM (recommended)

10 GB hard drive space

Internet connectivity, no special firewall ports needed.

Simple Interface

Little or no training required. Can be run in the background with no operator involvement.
